  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score

CATALYTIC ACTIVITY: Sucrose + {(1,6)-alpha-D-glucosyl}(N) = fructose + {(1,6)-alpha-D-glucosyl}(N+1).

SUBCELLULAR LOCATION: Secreted.

DISBASE: DENTAL CARIES.

MISCELLANFORD: CARIES.
 WATER-SOLUBLE GLUCANS (ALPHA 1,6-GLUCOSE) FORMS OF GLUCANS.
SIMILARITY: TO OTHER GLUCOSYLTRANSFERASES EINDING PROTEIN FROM S.MUTANS.
                                                                                                                                                      C. Natl. Acad. Sci. U.S.A. 99:14434-14439(2002).
FUNCTION: PRODUCTION OF EXTRACELLULAR GLUCANS, THAT ARE THOUGHT
TO PLAY A KEY ROLE IN THE DEVELOPMENT OF THE DENTAL PLAQUE BECAUSE
OF THEIR ABILITY TO ADHERE TO SMOOTH SURFACES AND MEDIATE THE

FUNCTION: PRODUCTION OF EXTRACELLULAR GLUCANS, THAT ARE THOU
TO PLAY A KEY ROLE IN THE DEVELOPMENT OF THE DENTAL PLAQUE E
OF THEIR ABILITY TO ADHERE TO SMOOTH SURFACES AND MEDIATE TH
AGGREGATION OF BACTERIAL CELLS AND FEBRIS.

CATALYTIC ACTIVITY: SUGTOSE + {(1,6)-alpha-D-glucosyl}(N) =
fructose + {(1,6)-alpha-D-glucosyl}(N+1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                          DISEASE: DEMTAL CARIES.

MISCELLANBOUS: GIF-I SYNTHESIZES WATER-INSOLUBLE GLUCANS (ALPHA MISCELLANBOUS: GIF-I SYNTHESIZES T., 3-LINKED GLUCOSE AND SOME 1,6 LINKAGES), GTF-S SYNTHESIZES WATER-SOLUBLE GLUCANS (ALPHA 1,6-GLUCOSE). GTF-SI SYNTHESIZES EFORMS OF GLUCANS.

SIMILARITY: TO OTHER GLUCOSYLTRANSFERASES AND SOME TO A GLUCANBINDING PROTEIN FROM S.MUTANS.

CC -:- FUNCTION: Is required not only for elongation of protein synthesis

CC but also for the initiation of all mRNA translation through

CC initiator tRNA(fMet) aminoacylation (By similarity).

CC -:- CATALYTIC ACTIVITY: ATP + L-methionine + tRNA(Met) = AMP +

CC diphosphate + L-methionyl-tRNA(Met).

CC --- COPACTOR: Binds 1 zinc ion per subunit (By similarity).

; Sequence 2, Application US/09008172
; Patent No. 6127602
; GENERAL INFORMATION:
APPLICANT: Nichols, Scott E.
APPLICANT: Nichols, Scott E.
TITLE OF INVENTION: Substitutes for Modified Starch and TITLE OF INVENTION: Latexes in Paper Manufacture
FILE REFERENCE: 0358D
CURRENT APPLICATION NUMBER: US/09/008,172
CURRENT FILING DATE: 1998-01-16
CURRENT FILING DATE: 1998-01-16
EARLIER APPLICATION NUMBER: 08/482,711
EARLIER FILING DATE: 1995-06-07
; NUMBER OF SEQ ID NOS: 2
SOFTWARE: FastSEQ for Windows Version 3.0
SEQ ID NO 2
LENGTH: 1430
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ; LENGTH: 545
; TYPE: PRT
; ORGANISM: Streptococcus mutans
US-09-604-957-4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 1
